ANNOUNCEMENTS
581
THE HOSPAL VISION OF THE FUTURE IN DIALYSIS MONITORING

which offers:

- All treatment options currently available while keeping totally open to those to come.

- A comprehensive and interactive communication capability.

Dedicated to a perfect balance
7th Congress of The International Society for Peritoneal Dialysis

June 18-21, 1995, Stockholm, Sweden

A Scientific Programme for Nephrologists, Nurses, Dieticians and Allied Professionals who have an interest in Peritoneal Dialysis:

- State-of-the-Art Lectures
- Symposia
- Free Communications
- Poster Sessions

Amongst the topics to be covered are:

- Physiology and transport kinetics
- Clinical results
- Adequacy
- Nutrition and metabolism
- Osteodystrophy
- Host defence and infectious complications
- Peritoneal access and connector systems
- New dialysis solutions and biocompatibility
- EPO
- Pediatrics
- Nursing

Exhibition:
There will be an exhibition designed to allow companies to present their latest developments and products in the various fields of Peritoneal Dialysis and Renal Care.

If you are interested in participating in this exciting congress, please fill in the reply slip below and send it to Stockholm Convention Bureau, PO Box 6911, S-102 39 Stockholm, Sweden, fax: +46-8-34 84 41.

Please send me more information:

☐ I am interested in partaking in the 7th Congress of The International Society for Peritoneal Dialysis

CRYSTAL AN69xs MEMBRANE

THE EFFICACY OF A HOLLOW-FIBER AND THE SAFETY OF A PLATE.

THE EFFICACY:

THE MYTH:
HOLLOW FIBER DIALYZERS ARE MORE EFFICIENT THAN PLATE DIALYZERS.

THE FACT:
CRYSTAL™ CLEARANCES EQUAL THOSE OF FIBERS.

THE SAFETY

• BLOOD IS NOT IN CONTACT WITH POTTING MATERIAL - AVOIDING ANY RISK OF LEACHING.
• COMPLIANT PLATE STRUCTURE PREVENTS BACKFILTRATION.
• GAMMA STERILIZATION IS AVAILABLE FOR CRYSTAL™.

* Clearance measured according to ISO 8637 standard with Qp = 500 ml/min and Qtr = 10 ml/min

Dedicated to a perfect balance
SPECIAL RATES AVAILABLE...

to companies and organizations

**Articles** relevant to your company or organization can be reprinted for circulation at seminars, conferences and exhibitions, so that key individuals in the medical world are kept fully up-to-date with the latest opinions, developments and status of your products, technologies and techniques.

**Bulk** subscriptions including your organizational logo, can be sent to those who practise at the forefront of your field, helping to raise your profile and underline your reputation.

**Supplement** proposals covering development and research or seminars and conferences are often considered by us, and once published, are always mailed to a highly targeted readership, ensuring that those who really need to know, do know.

RENAL FAILURE

Editor-In-Chief
WILLIAM F. FINN
Department of Medicine, University of North Carolina, CB #7155, 3034 Old Clinic Building
Chapel Hill, North Carolina 27599

While concentrating on acute renal injury and its consequences, Renal Failure also addresses advances in the fields of chronic renal failure, hypertension, and renal transplantation. Bringing together both clinical and experimental aspects of uremia, this journal presents timely, practical information on experimental models, pathophysiology, prevention and management, basic and clinical studies of renal function in the critically ill, and drug nephrotoxicity.

Renal Failure provides a unique, single-focus publication on a wide range of interdisciplinary fields pertaining to acute renal disorders and related topics.

CALL FOR PAPERS: Renal Failure, published in English, welcomes manuscript contributions. Those accepted will be published promptly. For complete details regarding manuscript preparation and submission, please contact the Editor-in-Chief directly.

1995 Volume 17, 6 Numbers
Institutional rate: $525.00
Individual rate: $262.50
ISSN: 0886—022X

To subscribe to Renal Failure or to receive a complimentary copy, please contact the Promotion Department at:

MARCEL DEKKER, INC.
Automated Peritoneal Dialysis (APD) is the fastest growing dialysis modality in the world today. APD emerges as a better option for certain groups of patients and is therefore a valuable alternative to other treatment options.

**APD provides:**
- more dialysis to those unable to meet their treatment targets on CAPD
- enhanced UF control for patients with high permeability
- overnight dialysis at home
- added freedom during the day
- extra convenience and enhanced quality of life
- reduced peritonitis incidence

**APD with HOMECHOICE™ system, a new way to go home:**
- Revolutionary solution control system
- Compact, portable home therapy
- Effective management of dialysis time
- Easy to use and quick to learn
- More ESRD patients able to benefit from APD therapy
- Improved quality of life - daytime freedom

The disposable cassette is at the heart of the HomeChoice™ system technology.
The simulation of gravity replaces the need for threading lines on pumps and eliminates the need to hang heavy bags at inconvenient heights.
